## Elemental Impurities

Ph. Eur. General Text 5.20; USP-NF General Chapter <232> and <233>; ICH Guideline Q3D(R2)

MEGGLE USA Products:

Lactose Monohydrate: GranuLac® 70, GranuLac® 140, GranuLac® 200

In the production process of the above mentioned MEGGLE USA Products, the elements classified in Class 1, 2A, 2B and 3 are not intentionally added in form of metal catalysts, metal reagents etc.

Permitted concentrations limits were calculated using the Permitted Daily Exposures and assuming a daily intake of the excipients of 10 g (ICH Q3D(R2), No 7 Option 1, stated in table A.2.2). Acceptance levels were defined as 30 % of the permitted concentrations.

Testing was conducted on the product GranuLac® 200 produced at MEGGLE GmbH & Co. KG, Wasserburg am Inn, Germany for the elements categorised as Class 1 and 2A relevant for oral route of administration according to the ICH Guideline Q3D(R2). This product is equivalent in terms of the monograph requirements, i.e. characters, identification, tests, functionality-related characteristics under consideration of the PDG harmonization process (Stage 6). It is expected that the results of the product are at least comparable to those of the US product. Several representative lots of GranuLac® 200 were tested using ICP-MS method in conformance to USP-NF <233>. Testing method has been validated for the matrix of the products.

Results are mainly < LoQ and shown on the table below which is valid for all above mentioned MEGGLE Products. In case of a quantifiable result, the highest value is given. All results are below 30 % of the acceptance levels for oral application. In consequence, additional controls are not required.

MEGGLE USA has implemented an ongoing monitoring program for elemental impurities in accordance to the regime of the initial study performed. The program is conducted at MEGGLE GmbH & Co. KG.
